(54) Title: A MARINE FUEL SUPPLY SYSTEM AND A MARINE CRAFT INCLUDING SAME

(57) Abstract: A marine fuel supply system is disclosed in which a salt water sensor 13 is positioned between a fuel reservoir 1 and a pump 3 used to pump fuel from the reservoir 1 to an internal combustion engine. The water sensor 13 is located near to the bottom of a closed vessel forming part of a water separator 2 so as to sense when salt water separated from the fuel has reached a pre-determined level. A signal is then sent to indicator means in the form of an electric lamp 21 and buzzer 22 to warn an operator of the marine craft of the need to drain off the collected salt water.

## \* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"Z" document member of the same patent family
